

TEJO[®]

The foremost name
in **industrial**
cleaning machines

Industrial Teijo® cleaning machines have been manufactured in Finland since 1967. During the last few decades more than 14 000 machines, standard and special, have been delivered to customers all over the world. The main markets for Teijo are Scandinavia and Europe where its name is known for **reliability, quality** and **user friendly design**.

Our product portfolio consists of a wide range of standard machines including top and front loading single stage and multi stage cabinets and tunnels. In addition we offer customised machines for a variety of different applications from grease removal to phosphating. The machines are manufactured in stainless steel. There is a comprehensive range of accessories available for all machines. Rotating spray pipes have always been essential characteristics of our machines enabling a simple technical solution for the cleaning of heavy or difficult shaped articles. Large capacity fluid tanks allow longer periods between fluid changes and prevent loss of fluid temperature. Timer controlled heating and efficient insulation are standard features leading to low operational costs.

Why Teijo®?

- Excellent cleaning results
- Reliable and easy to use
- Low life cycle costs

Low operational costs

- Efficient insulation reduces heat loss
- Effective filtering and recycling extend the service life of the washing fluid
- Low maintenance costs and high usability

Safe and eco-friendly

- Closed washing fluid circulation
- Waste oil can be separated from the washing fluid
- Closed washing chamber prevents the working environment from steam and sprays

Beyond our large product portfolio we also produce customised machines based on customer specific needs.

Investments in our manufacturing enable flexible production and quick deliveries.

Our customer base is very diverse. In addition to the traditional service and repair workshops, cleaning machines are often integrated into automated production lines. Apart from cleaning and degreasing there are also other surface treatments such as phosphating as part of the process. Our experience and close co-operation with the leading detergent suppliers ensures the ability to carry through any project no matter how challenging.

We are prepared, with great enthusiasm, to deal with the demands of our existing or future customers.
