

Synthetics Cutting & Grinding Fluids

Synthetic

	Application	Product	Benefit
	Cutting fluid minimizes cobalt leaching in the grinding of tungsten carbide (WC) and other high cobalt materials	TRIM Grind WC	Keeps super-abrasive wheels clean while not attacking super-abrasive wheel bonding system. Very low carryoff equals low fluid makeup costs
	High-performance, synthetic fluid for working cast iron and mild steels.	TRIM C 115	Excellent corrosion inhibition on most common ferrous and nonferrous alloys Extremely low carryoff keeps operating costs down Low foam and mist.
	Oliefri bearbejdnings- og slibevæske som anvendes på specielt ædle metaller	TRIM C 272	Anvendes hvor der kræves store væskemængder og højt tryk i bearbejdningsområdet. Trim C272 er godkendt til brug i flyindustrien.

TRIM® clean-running synthetics contain little-to-no oil. They are hard-water tolerant with good corrosion protection. Plus, synthetics leave very low residue for easy cleaning.
